A,Title: Structural studies on the zinc-endopeptidase light chain of tetanus neurotoxin. A,Feference number: 869348; MUD:95262688; PMID:7744050
A,Accession: 869348
A,Accession: 869348
A,Residues: 2-31 CDEF-
C,Comment: The source of this protein was an extrachromosomal plasmid. Grayment: The precursor is cleaved by endogenous proteinase activity to form light (fra dual chains are not toxic when separated): The amino end of the heavy chain (fragment B). Comment: Fragment B forms ion channels in a lipid bilayer. Fragment C binds to ganglid C,Comment: This potent neurocoxin binds to peripheral neuronal synapses, is internalized presymptic neurons. It inhibits neurotransmitter release by proteolytic cleavage of sy

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                    1017041

Sonadoliberin I - American alligator
NyAlternate names: gonadotropin-releasing hormone I
Sybecies: Alligator mississippiensis (American alligator)
C;Species: Alligator mississippiensis (American alligator)
C;Species: Alligator mississippiensis (American alligator)
C;Species: J. Mar-1993 #sequence_revision 31-Mar-1993 #text_change 18-Mar-1997
C;Accession: A60066
R;Loveioy, D.A.; Fischer, W.H.; Parker, D.B.; McRory, J.E.; Park, M.; Lance, V.; Swansc Regul. Pept. 33, 105-116, 1991
A;Title: Primary structure of two forms of gonadotropin-releasing hormone from brains of A;Reference number: A60066; MUID:91352338; PMID:1882082
                                                                                                                                                          A, Description: stimulates pituitary secretion of lutropin and follitropin
A; Note: gonadoliberin-associated protein may have prolactin release inhibiting activiy
A; Note: gonadoliberin-associated protein may have prolactin release inhibiting activiy
C; Superfamily: gonadoliberin
C; Keywords: amidated carboxyl end; hormone; hypothalamus; placenta; pyroglutamic acid;
F; 1-23/Domain: signal sequence #status predicted <SIGN>
F; 24-32/Product: progonadoliberin #status predicted <GIN>
F; 24-32/Product: prolactin release-inhibiting factor #status predicted <PIF>
F; 24/Modified site: pyrrolidone carboxylic acid (GIN) (in mature form) #status predicts
F; 33/Modified site: amidated carboxyl end (GIy) (amide in mature form from following g]
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 gonadoliberin I precursor - chicken
NyAlternate names: gonadotropin-releasing hormone I
Cispecies: Gallus gallus (chicken)
Cispecies: Gallus gallus (chicken)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              gonadoliberin precursor - mouse
NiAlternate names: gonadotrophir-releasing hormone (GnRH); luteinizing hormone
NiContains gonadoliberin; gonadoliberin-associated protein (GAP)
C;Species: Mus musculus (house mouse)
C;Date: 31-Dec-1993 #sequence_revision 18-Mar-1997 #text_change 18-Jun-1999

A;Title: The frog GnRH-I gene has a mammalian-like expression pattern and conserved doma A;Reference number: 151423; MUID:94185563; PMID:8137750
A, Residues: 1-10 cBUR>

A, Note: the natural and synthetic hormones have the same biological activity
C, Comment: This hypothalamic hormone stimulates the secretion of both luteinizing and for Superfamily: gonadoliberin
C, Superfamily: gonadoliberin
C, Superfamily: stronglutamic acid
F, 1/Modified site: pyrrolidone carboxylic acid (Gln) #status experimental
F, 10/Modified site: amidated carboxyl end (Gly) #status experimental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

Patent No. 540386
GENERAL INFORMATION:
APPLICANT: STEWART, Andrew G.
APPLICANT: TSONIS, Con G.
TITLE OF INVENTION: FUSION PROTEINS
NUMBER OF SEQUENCES: 47
CORRESPONDENCE ADDRESS:
ADDRESSEE: Foley & Lardner
STREET: 3000 K Street, N.W.
CITY: Washington, D.C.
COUNTRY: USA
ZIP: 20007-5109
COMPUTER READABLE FORM:
MEDIUM TYRE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PREPLICATION NUMBER: US/07/690,983D
FILING DATE: 25-UN-1991
CLASSIFICATION NUMBER: US/07/690,983D
FILING DATE: 24-AUG-1990

                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 1, Application US/07690983D
Patent No. 5403586
GENERAL INFORMATION:
APPLICANT: RUSSELL-JONES, Gregory J.
APPLICANT: TSONIS, Con G.
TITLE OF INVENTION: FUSION PROTEINS
NUMBER OF SEQUENCES: 47
CORRESPONDENCE ADDRESS:
ADDRESSEE: FOLEY & Lardner
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         LENGTH: 10 amino acids
TYPE: amino acid
TYPE: amino acid
TOPOLOGY: linear
MOLECTLE TYPE: protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         NAME/KEY: Modified-site

                                                                                                                                                                                                                                                                                                                                                                                                                                        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 2, A
